SUMMARY

Frontend Developer with 4+ years of experience building enterprise web applications using React.js, Next.js, TypeScript, Redux, and modern frontend technologies. Experienced in dashboard development, CMS-driven websites, mobile web-view platforms, REST API integrations, performance optimization, and delivering scalable user-centric solutions across multiple business domains.

EXPERIENCE

T7E Aftermarket Connect Pvt. Ltd. | Frontend Developer

09/2024 – Current

- Loyalty Workforce Management Platform – Led frontend development across multiple business-critical dashboards supporting loyalty programs, rewards tracking, workforce management, KYC verification, location monitoring, and operational reporting for mechanics, retailers, dealers, distributors, painters, field teams, and business stakeholders. Built advanced reporting interfaces using tables, charts, filters, maps, and analytics dashboards with REST API integrations.
- Developed reusable React and Next.js components to improve maintainability and consistency across projects, collaborating with backend teams to ensure seamless data flow across web and mobile ecosystems.
- Mobile Web-View Platform – Developed dynamic web-view applications integrated within mobile apps, enabling rapid rollout of campaign pages, forms, reward journeys, lucky draw modules, leaderboards, and engagement experiences without requiring frequent app releases.
- Corporate Website Revamp – Designed and developed the company website using Next.js and Strapi CMS, replacing the legacy WordPress implementation; implemented reusable page templates, responsive layouts, SEO-friendly architecture, and CMS-driven content workflows.
- Platform Modernization – Migrated multiple applications from Node.js 14 to Node.js 22, resolved dependency and compatibility issues, and optimized frontend performance; supported Jenkins pipelines, Docker-based deployment, and AWS-hosted environments.

V2STech Solutions Pvt. Ltd. | Software Engineer

05/2024 – 08/2024

- Healthcare Benefits Portal – Developed frontend modules for a healthcare benefits platform facilitating cashless treatment workflows under government health insurance schemes, building React/TypeScript modules from scratch with reusable UI components using Material UI and Styled Components.
- Implemented complex forms using Formik and Yup validation; integrated REST APIs supporting beneficiary management and claims workflows; participated in testing, debugging, and code quality improvement initiatives.

Axioned | Software Engineer

01/2022 – 03/2024

- Product Information Management Dashboard – Developed React-based dashboards and reusable Redux components for managing product and ingredient information workflows, integrating backend APIs and collaborating with cross-functional teams on features, enhancements, and maintenance.
- Shopify Integration Plugin – Created customer-facing Shopify integration modules and frontend functionality, ensuring adherence to SonarQube standards for code quality.
- Home Warranty Platform – Developed JAMstack websites using Eleventy and Nunjucks, enhancing user experience with filtering, pagination, geolocation features, responsive design, and seamless Netlify deployments.
- Conducted code reviews, managed Git workflows, and resolved production issues to ensure code quality and reliability.
